1 Introduction

The **Bapco Energies Group Performance Dashboard** is a web-based, single-page application that provides a real-time view of the organisation's key performance indicators across four strategic domains: Corporate Scorecard, Operations, Business Management Plan, and Safety. It is designed for senior management, performance analysts, and SBU leaders who need an at-a-glance picture of performance against plan.

■ Live URL: <https://ahmedmelaih.github.io/bapco-performance-dashboard/> — accessible from any modern browser on desktop or mobile, no login required.

2 Getting Started

Supported browsers: Chrome 110+, Edge 110+, Safari 16+, Firefox 115+.

Device support: Desktop (1280 px+), tablet, and mobile (responsive layout).

No installation required — open the URL in any supported browser.

Internet connection	Required to load the page and fonts
JavaScript	Must be enabled in the browser
Screen width	Minimum 360 px (mobile optimised)

3 Dashboard Overview

The screenshot below shows the dashboard as it appears on first load. The **Overview** tab is selected by default and displays the corporate Group Performance Score, SBU breakdown, throughput trend, and Balanced Scorecard summary.

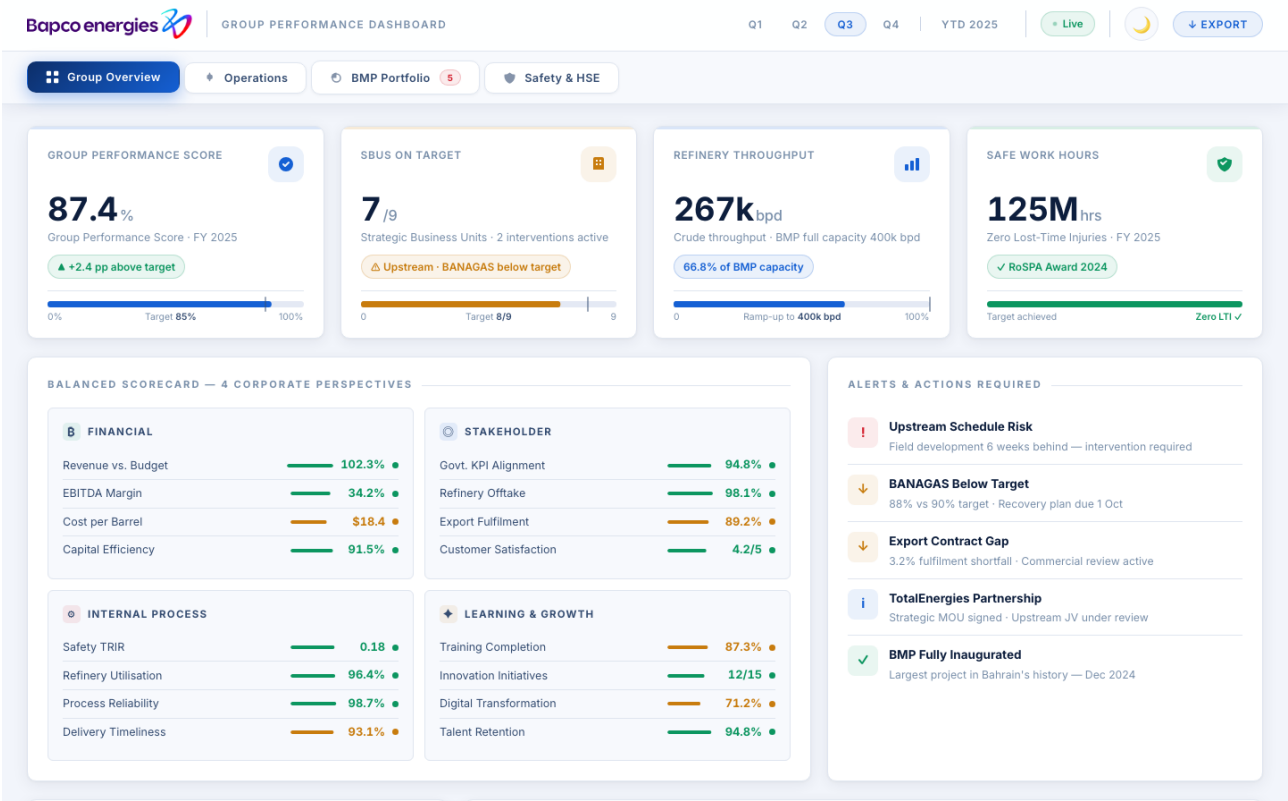

Figure 1 — Dashboard on first load (Overview tab, light mode)

4 Navigation

The dashboard uses a tabbed navigation bar directly below the Bapco Energies header. Each tab opens a different performance domain. The active tab is highlighted with a gradient blue pill and a subtle shadow lift.

Overview	Grid	GPS score, SBU chart, throughput trend, BSC
Operations	Flame	Refinery utilisation, process reliability, export & delivery
BMP	Briefcase	Business Management Plan progress, project milestones
Safety	Shield	LTIF, safety KPIs, near-miss statistics, fatigue indicators

Period selector: A row of buttons (Q1, Q2, Q3, Q4, YTD) at the top-right of the header lets you switch the reporting period. All KPIs, charts, and progress bars update instantly when you change the period.

5 Overview Tab

The Overview tab is the command-centre view, summarising corporate performance at a glance.

Key sections:

- **GPS Score card** — Group Performance Score expressed as a percentage. The animated progress bar and large number update with the selected period.
- **SBU Count card** — number of Strategic Business Units currently on-track.
- **Throughput card** — total volume produced (MMBBL) vs plan.
- **Safety card** — Lost Time Injury Frequency rate; green = on target.
- **SBU Performance chart** — horizontal bar chart comparing each SBU's score.
- **Throughput Trend chart** — line chart showing monthly production vs plan.
- **Balanced Scorecard (BSC)** — four strategic perspectives (Financial, Customer, Internal Process, Learning & Growth) each showing a progress bar against target.

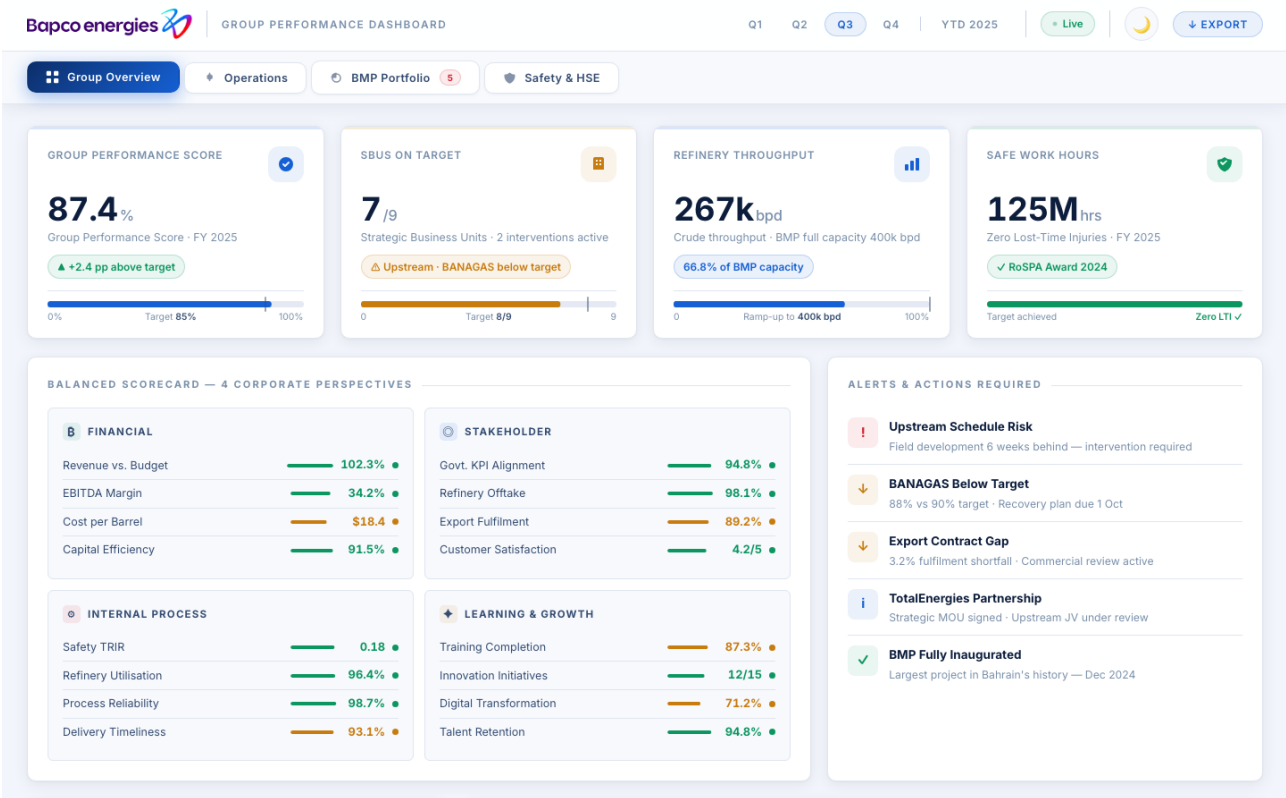

Figure 2 — Overview Tab

6 Operations Tab

The Operations tab monitors the physical performance of the refinery and supply chain.

KPI cards:

- Refinery Utilisation** — Actual throughput vs nameplate capacity. Target 95 %. Green when above target.
- Process Reliability** — Percentage of planned operating hours achieved without unplanned outages. Target 97 %.
- Export Fulfilment** — Percentage of contracted export volumes delivered on time. Target 92 %.
- Delivery Timeliness** — On-time delivery rate across all product grades. Target 95 %.

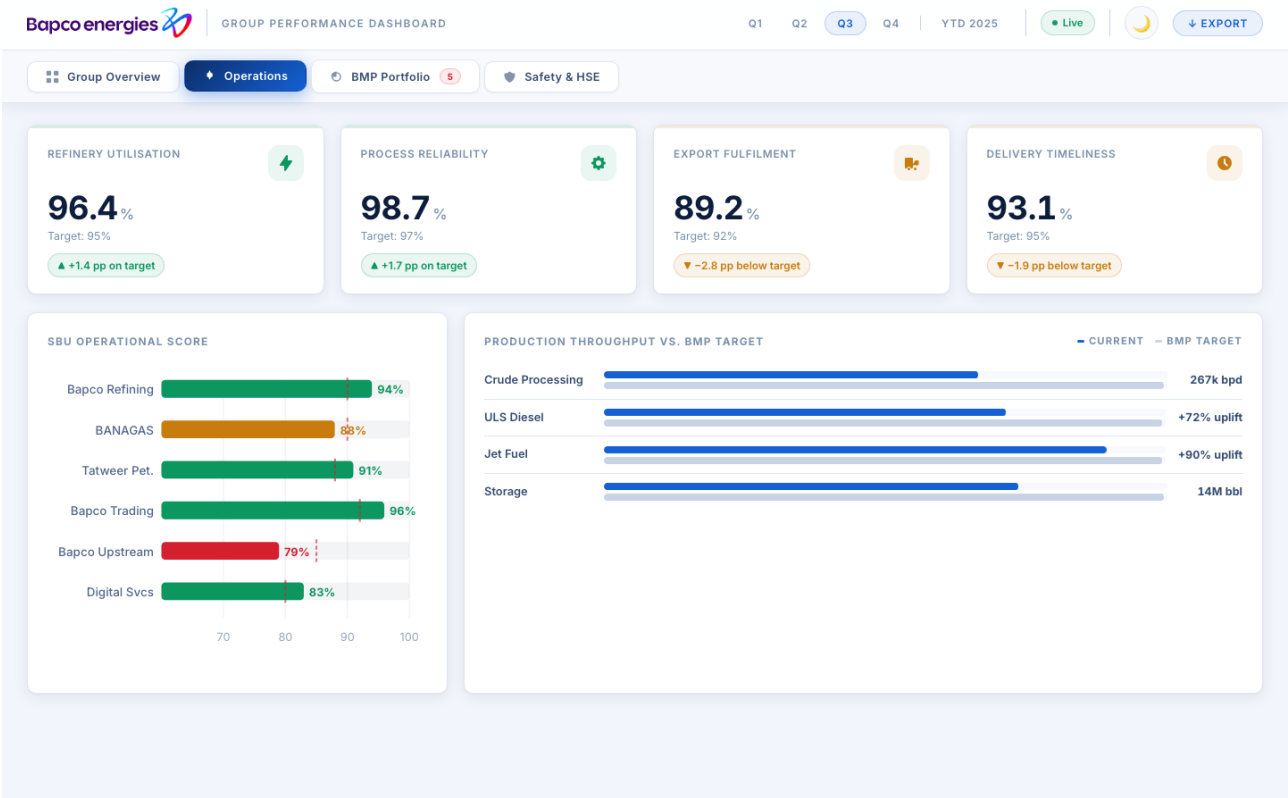

Figure 3 — Operations Tab

7 Business Management Plan (BMP)

The BMP tab tracks the annual business plan execution across SBUs and strategic initiatives. It surfaces milestones, completion rates, and variance against planned targets.

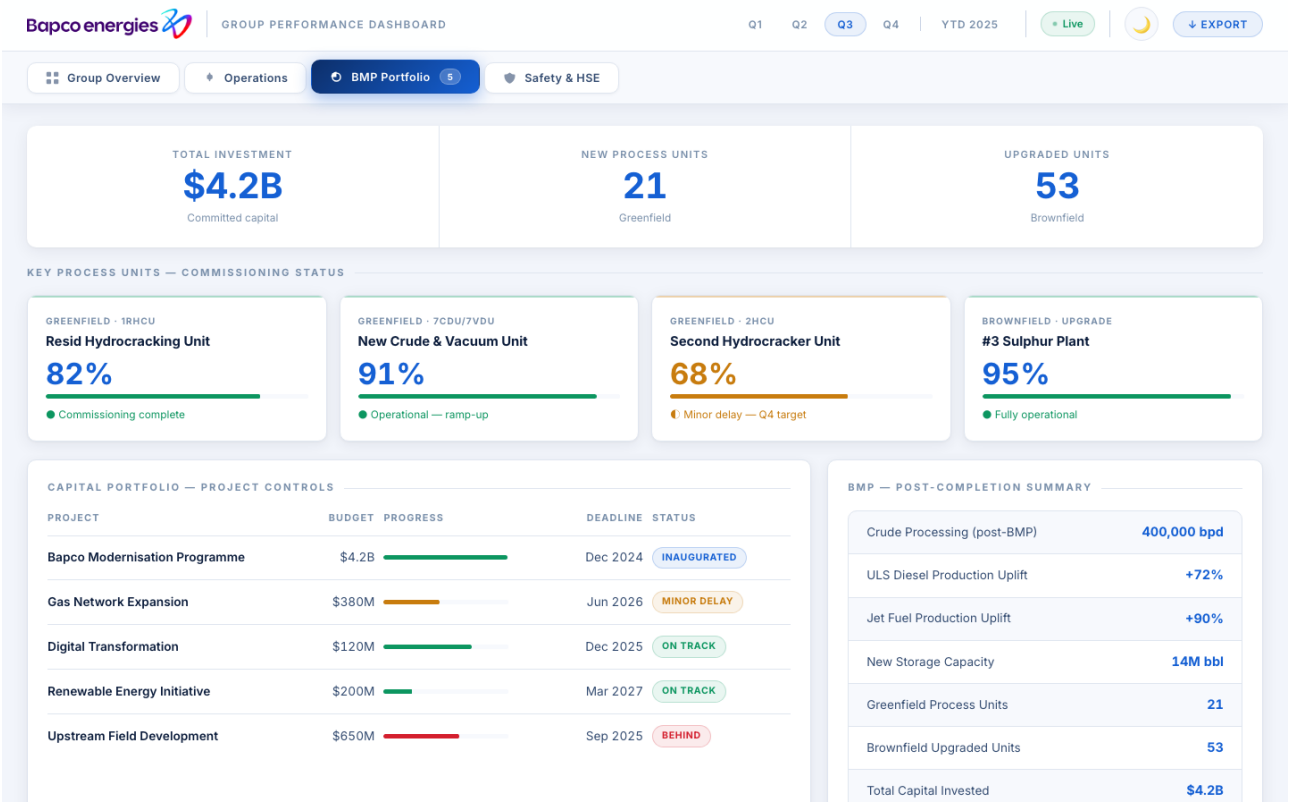

Figure 4 — Business Management Plan Tab

Each SBU tile shows its overall BMP completion percentage and a colour-coded status. The milestone table at the bottom lists individual deliverables, planned vs actual completion dates, and a RAG status badge.

8 Safety Tab

The Safety tab consolidates the organisation's health, safety, and environment metrics in a single view, enabling rapid identification of areas requiring attention.

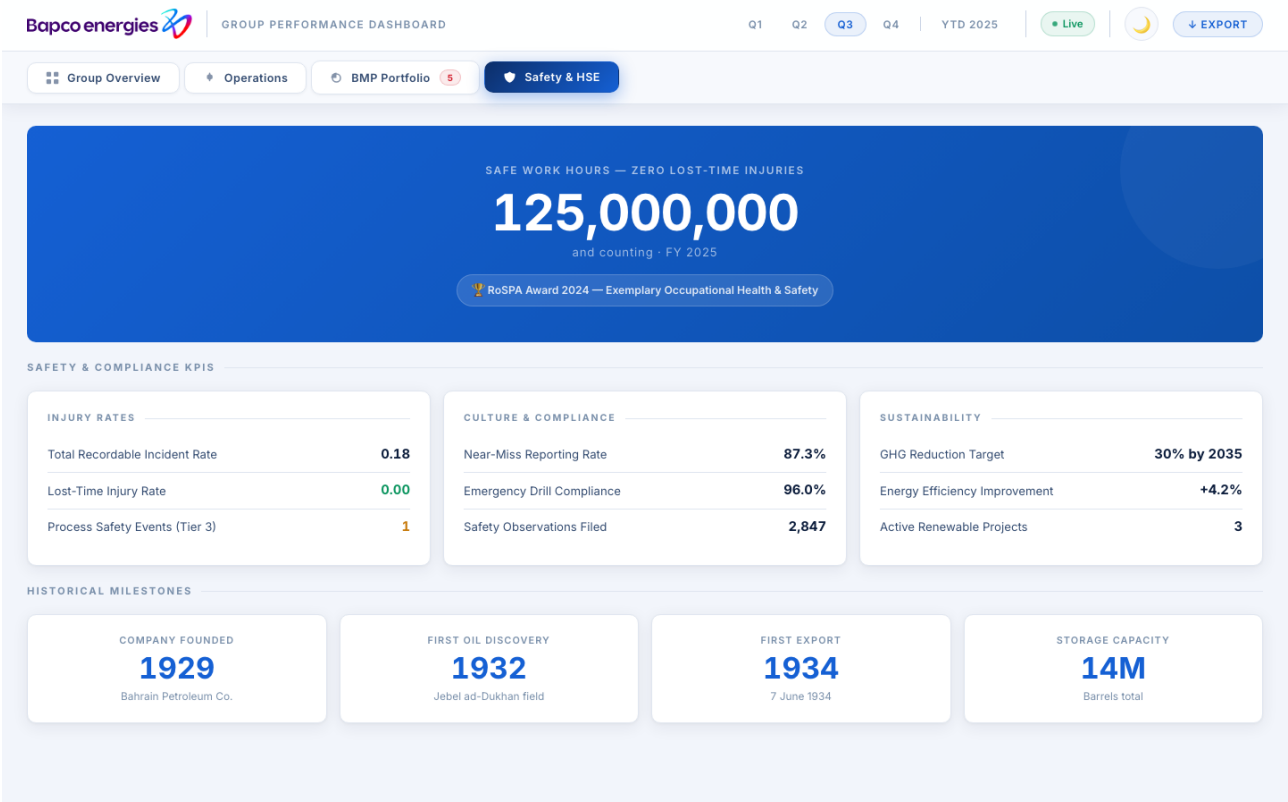

Figure 5 — Safety Tab

- **Days Without LTI** — running count of days since the last Lost Time Injury. Displayed prominently as the safety headline metric.
- **LTIF** — Lost Time Injury Frequency (incidents per million hours worked).
- **Near-Miss Reports** — total submitted vs target; higher reporting indicates stronger safety culture.
- **Safety Observations** — proactive hazard observations raised by the workforce.
- **Safety Training** — percentage of workforce current on mandatory safety certifications.

9 Dark Mode

The dashboard ships with a built-in dark theme designed for low-light environments and presentation displays. To toggle dark mode, click the **moon icon** (🌙) button in the top-right corner of the header. The preference is saved in the browser and restored on the next visit.

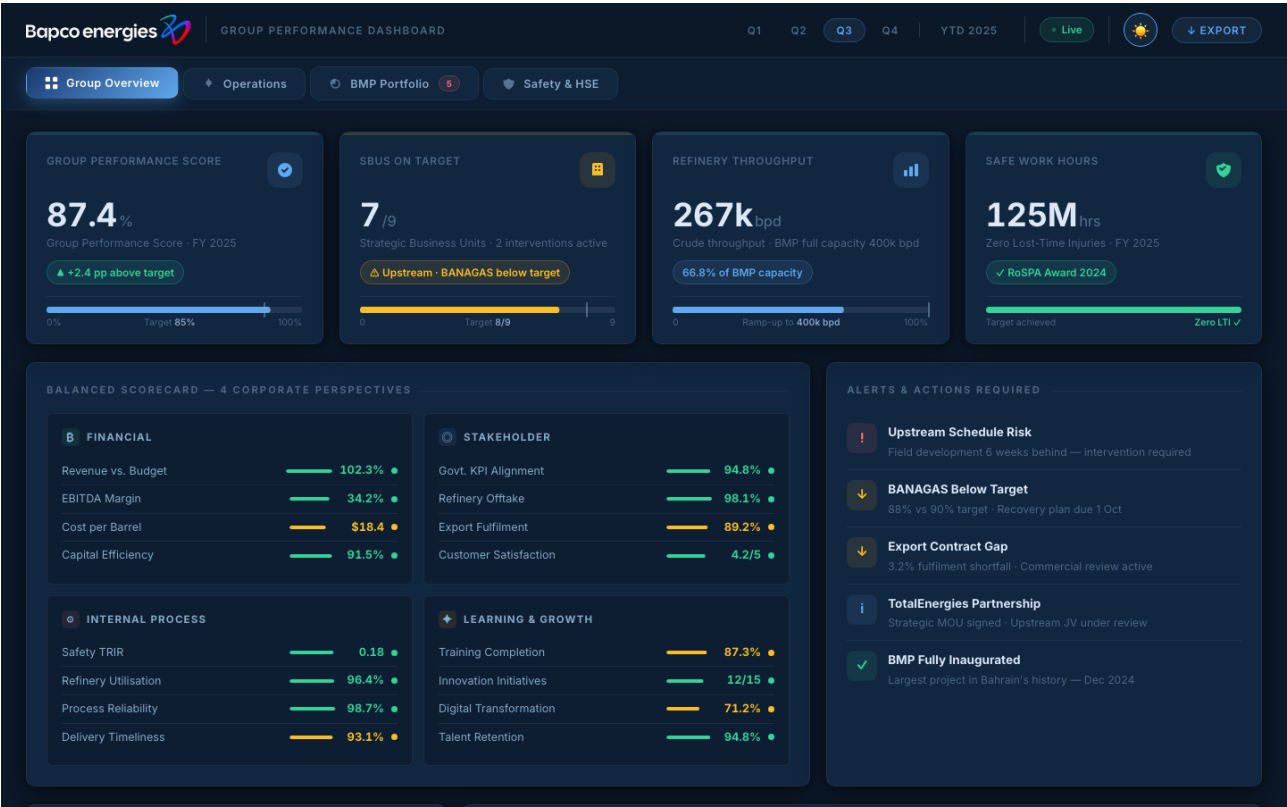

Figure 6 — Dashboard in dark mode

10 Period Selector

The period selector appears in the header bar and controls the reporting period shown across all tabs simultaneously.

Q1	January – March
Q2	April – June
Q3	July – September
Q4	October – December
YTD	Year-to-date (cumulative total)

■ All charts, KPI numbers, progress bars, and status badges reflect the selected period instantly — no page reload required.

11 Interpreting KPI Cards

Each KPI card follows a consistent layout:

Icon chip	Colour-coded square icon in the top-right. Colour reflects performance status.
Large number	The primary KPI value for the selected period.
Target line	Shows the plan target for context.
Delta badge	▲ green = above target · ▼ amber/red = below target.
Progress bar	Animated bar showing actual vs target (present on overview cards).

12 Frequently Asked Questions

Q: The charts are not loading. What should I do?

A: Ensure JavaScript is enabled in your browser and that you have an active internet connection. Try a hard refresh (Ctrl+Shift+R on Windows, Cmd+Shift+R on Mac).

Q: Can I download the data shown on the dashboard?

A: The current version is read-only and does not support data export. Contact the performance team if you need the underlying data.

Q: The numbers look different from what I see in our BI system.

A: The dashboard reflects data as at the last update cycle. There may be a 24-hour lag compared to live BI systems. For critical variance analysis, use the primary data source.

Q: How do I report a bug or request a new feature?

A: Contact Ahmed Melaih at ahmedelaih@gmail.com with a description of the issue and a screenshot if possible.

Q: Is the dashboard mobile-friendly?

A: Yes. The layout is fully responsive. On mobile devices the tab navigation moves to a bottom bar for easier thumb access.
